Two schools in Worcester get science labs

Esselenpark Secondary School and Zwelethemba High School in Worcester celebrated their new science laboratories at a launch last week. The partnership between advancing knowledge, a non-profit company, Garden cities archway foundation and the Western Cape education department, continues a process to improve the infrastructure in the school's STEM subjects (science, technology, engineering technology) which is taught by constructing modern science laboratories called Science teaching and learning Centres (Science TLCs). At the top is Esselenpark and the bottom photo is Zwelethemba. Photo: Esselenpark Secondary School/ Facebook
